

GROUNDING & BONDING INSPECTIONS

Grounding and bonding inspections are essential when identifying poor electrical connections. Spark Power ensures that all equipment used to load, unload, and move volatile liquids and powders safely throughout your facility are properly grounded. This helps to prevent potential explosions caused by electrostatic discharge.

When you would need it

When handling volatile liquids or moving flour, starch, sugars, or powders from silos to process mixers, an accidental discharge of static electricity can cause a fire, explosion, or – in worst case scenarios – injury to personnel. By working with Spark Power, you can rest assured that all equipment and pipes are properly bonded to the building structure and ground, significantly minimizing these risks.

How we provide this offering

Spark Power's highly trained and certified technicians ensure all faulty ground/bonding connections are identified and noted in a detailed report that includes possible corrections.

Why Spark?

Spark Power's technicians provide you with options to remedy any issue and can provide a quote on cost of repairs while following all proper health and safety protocols.

Spark Power is a leading independent provider of end-to-end electrical services, operations and maintenance services, and energy sustainability solutions to the industrial, commercial, utility, and renewable asset markets in North America. We work to earn the right to be our customers' Trusted Partner in Power™.
