

PRE-SERVICE TESTING

Spark Power's pre-service testing supports our customers with a critical stage in their system installation - enabling safe start-up, and energization of installed substation equipment.

What it is

Pre-service testing is a crucial step to ensuring your facilities run safely and effectively. Spark Power provides testing for both indoor and outdoor substations across a full range of voltages.

Why you need it

Pre-service testing verifies ahead of energization that your substation equipment will safely operate as intended. This is a critical step in ensuring the safety of plant staff, and in protecting infrastructure from damage that could result from a catastrophic start up failure.

How we provide this offering

Whether during the week or over the weekend, our team of experts are ready and available to support your business needs. Our professional technicians and technologists follow proven best practices to plan and implement your project's pre-service testing requirements - no matter the size and level of complexity.

Why Spark?

Safety is the #1 priority for Spark Power and our customers. We have been providing this service safely and reliably since 1970. Spark Power has the proven project experience to successfully deliver on your pre-service testing requirements.

WE ARE YOUR TRUSTED PARTNER IN POWER™

We are independent

- Unbiased service provider
