

THERMOGRAPHIC SCANS

Thermal inspections are essential in identifying failures before they occur. Spark Power will help to maintain an efficient electrical network in your facility through thermographic inspections of electrical connections. Our experience and expertise in critical equipment repairs give us the distinct advantage of providing safe and accurate on-line inspections with no downtime.

Why you need it

Thermographic scans of electrical equipment are essential in preventing premature failure of your electrical equipment. If not corrected properly, this can lead to downtime, the stopping of production, damaged equipment, injury to personal and/or lost revenue.

Electrical equipment which should be scanned on a yearly basis includes:

- Breaker panels
- Circuit breakers
- Disconnects
- Panel boards
- Control cabinets
- Battery banks
- Splitters
- Transformers

How we provide this offering

Spark Power's highly trained and certified technicians ensure that all hot spots are identified and possible causes are noted in a detailed report that includes possible solutions.

Why Spark?

Our highly trained and certified technicians have the expertise, proven project experience, and resources needed to ensure services are provided safely and on time. We have been providing this service safely and reliably since 1970.

Spark Power is a leading independent provider of end-to-end electrical services, operations and maintenance services, and energy sustainability solutions to the industrial, commercial, utility, and renewable asset markets in North America. We work to earn the right to be our customers' Trusted Partner in Power™.
